About Us

Established in the year of 1993, Actron Technology has now evolved into one of the leading information technology service providers in Malaysia. Under the roof of Actron Technology, we combine deep business expertise, powerful research capabilities, and apply our business insights together with our technology alliances to develop fresh, innovative solutions that provide real and measurable business outcomes.

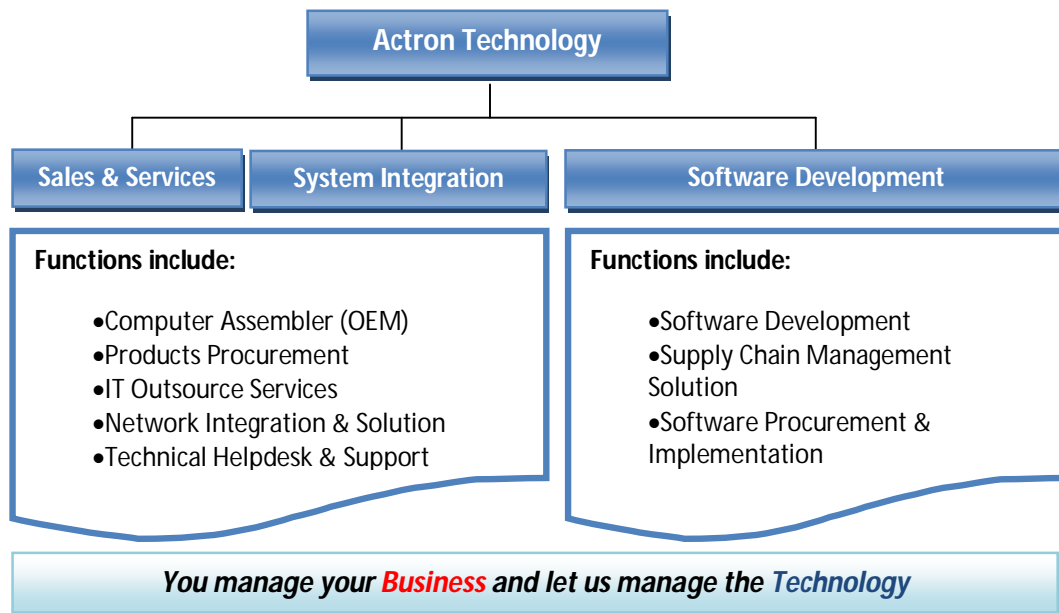

Being one of the pioneers OEM Assembler for personal computer and server systems under the registered trademark "TASS Computer System", Actron Technology has broadened its scope of services with the focus on software development and supply chain management to its broad scope of clients from private individuals to various multinationals.

It has always been our strategic focus to understand our clients' business and individual's needs and to deliver practical solutions and competitive advantage as to optimize our clients' business performance.

It is always our philosophy that having the right people is the #1 way to ensure customer expectations are exceeded and the desired results are achieved.

**"Business Solutions
Through
Information Technology"**

Computer Sales & Services

- **Computer Assembler (OEM)**

Being one of the pioneers OEM Assembler for personal computer and server systems under the registered trademark "TASS Computer System", "TASS Computer System" offers more benefits as compared to other branded PC whereby at Actron Technology, we provide value-added services on top of each PCs that you purchased at almost no cost at all; such as the following :-

- Initial Computer Setup
- Network Configuration for Local Area Network (LAN)
- Data Migration from old PC to "TASS Computer System"

- **Products Procurement**

Over the past 19 years, Actron Technology has cultivated strong relationships with a comprehensive list of technology vendors and service providers to ensure our customers receive the right product at the right time for the right price.

- **IT Outsource Services**

At Actron, we are pleased to introduce our "**IT Outsource Services**" for your hardware, software and business requirements. Our "**IT Outsource Services**" can be configured to compliment your every need that is best suited to your environment. For a minimal monthly, quarterly or yearly fee, you are free from all the headaches of managing and organizing your IT resources. You will also enjoy "peace of mind" 24 hours a day, 365 days in the year.

- **Network Integration & Solution**

At Actron, we can help you with all of your computer needs - whether you need to acquire your first computer, are looking to upgrade all of your office computers, or want to set up a computer network. We have specialists who can set up a local area network in your office so you can not only share information amongst your coworkers, but create a secure IT environment for doing business over the internet. We have work with broad scope of clients from private individuals to various multinationals. The size of your company or the size of your network isn't an issue.

Our network services include:

- New network design and deployment
- Existing network expansion and upgrades
- Wireless LAN setup
- Internet connectivity integration
- Network antivirus installation and management
- Remote connectivity
- Network cabling installation and troubleshooting
- Firewall installation and management

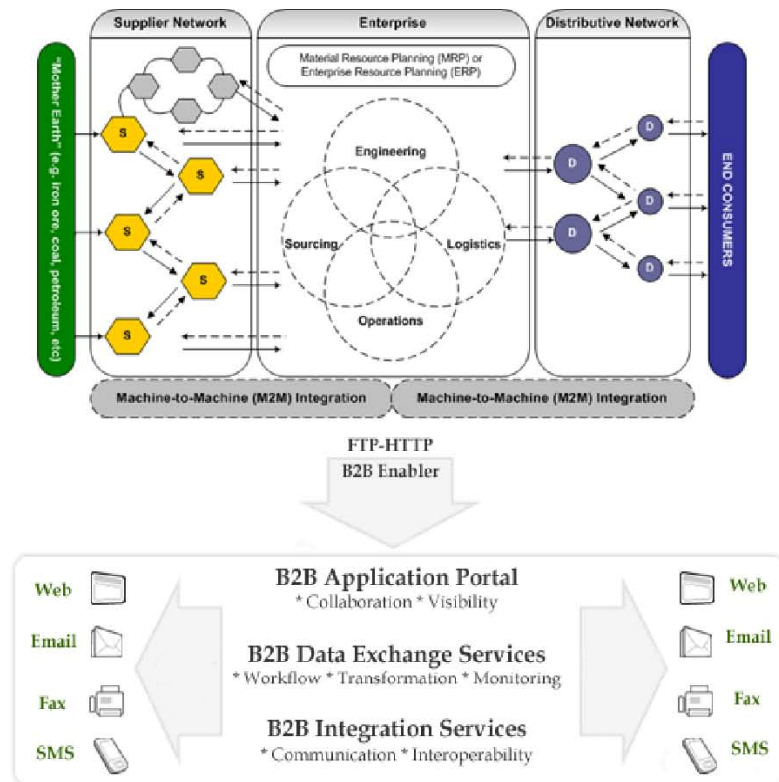

- **Technical Helpdesk and Support**

Actron Technology provides technical problem resolution and support to ensure that your hardware and software are up and running with minimal interruption to your business operation with the assistance of our team of competent technicians who are capable of repairing printers, monitors and PCs. This allows for economical repair of your peripheral components and you can be assured that your peripherals are in good hands and will be restored to the optimal operating condition.

B2B Data Exchange

B2B Data Exchange is an exchange that enables buyers and suppliers exchange of information to improve the flow of materials and orders or negotiate prices and fulfill online transactions between one another and are either private or public.

Goal: The ability to allow a "company's factories (to) communicate internally, with each other, and with headquarters as well as with its network of suppliers and customers to improve the flow of materials and orders."

The Benefits			
BUYERS			SUPPLIERS
Purchasing / Planning	I.T. / EDP Centre	Finance	
<ul style="list-style-type: none"> • Reduce Inventory • Reduce Waste (e.g. space, time etc) • Upgrade of skills (Knowledge Workers) • Visibility and management collaboration • Suppliers' performance benchmark 	<ul style="list-style-type: none"> • Ease of deployment / administration • Fast, cost-effective upgrades • Ease of Integration with existing system • Ability to support operations effectively 	<ul style="list-style-type: none"> • Operational efficiency • Reduced labor costs • Rapid systems ROI • Low total costs of ownership over the long term • Ability to exceed customer expectations 	<ul style="list-style-type: none"> • Visibility of information • Ease of planning (Trading or Production) • Cargo maximization (e.g. VMI) • Business growth opportunity (with sourcing capability added)

Software Development

- **New Application Development**

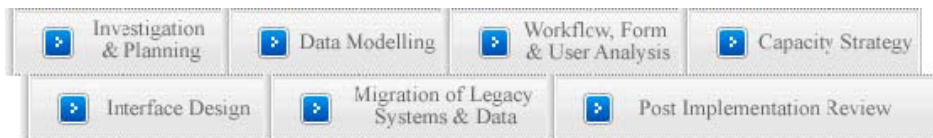

Through years of experience, we have gained solid cross-domain experiences that help us to understand and optimize customers' business processes. We...

- . thoroughly study customer's specific needs to building systems that match to those needs.
- . leverage the full potential of up-to-date technology platforms especially with Microsoft.NET technology.
- . aimed at producing technically complex while elegant and intuitive solutions that cost less to develop and maintain.
- . adapt the best industry practices to helps us to ensure successful on-time and on-budget results for our clients.

- **Database Development**

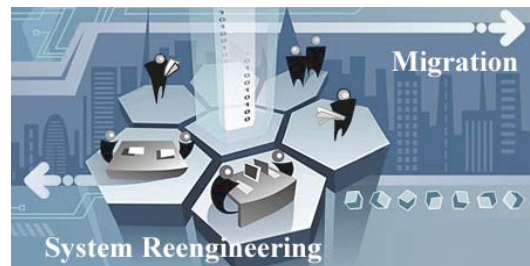

Database driven solutions have given new approaches to effective business information management due to the flexibility of data retrieval, storage and manipulation processes that they provide.

Employing the data structuring and processing advantages that databases grant, we devotes client-server and web-based applications development process to providing our clients with efficient and scalable solutions suiting contemporary business needs. Our database, programming and development services include:

- **System Reengineering & Migration**

Organizations worldwide have been running business based on legacy applications that have evolved for many years across diverse platforms. In 21st century greater performance efficiency and web-enabled interactivity are needed to support these businesses.

Migration-to-Web of legacy applications allows organizations to reach 2 goals of extending the knowledge of these applications, while deploying the execution potential of latest technologies such as Microsoft .NET. Our extended experience in business software applications combined with our applied expertise in the wide set of available web technologies ensures successful migration of your application to the web. Our step-by-step approach:

Take a close study of legacy application. Apprehend business functionality. Determine technological requirements and risks. Determine the optimal migration solution regarding your specific situation. Assure effective realization and smooth migration by means of constant monitoring and project management.
